

DRAFT TECHNICAL MEMORANDUM

To: Steve Walthour, General Manager, North Plains Groundwater Conservation District
From: Neil Deeds, INTERA
Date: March 16, 2016
RE: DRAFT GMA-1 Predictive Runs

1 INTRODUCTION

Four predictive runs were completed for GMA-1 with the TWDB High Plains Aquifer System GAM. These runs represent variations of the run described in the memo submitted to TWDB August 31st, 2015, titled “DRAFT GMA-1 Predictive Runs Performed Under TWDB Contract for Development of the High Plains Aquifer System Groundwater Availability Model.”

Four new runs were completed. The guidelines for these runs are provided by GMA-1 representatives. Variations in the scenarios are described below.

Run 2016.1: New initial pumping rates in the Ogallala Aquifer were set for all counties in North Plains GCD (NPGCD), along with target rates for year 2020 for four of the counties in NPGCD as follows (acre-feet per year):

County	2012	2013	2014	2015	2016	2020
Dallam	371,965	399,272	393,624	314,899	400,000	390,000
Hansford	218,793	201,914	211,634	169,307	277,961	
Hartley	458,696	458,998	442,058	353,646	450,000	400,000
Hutchinson	72,230	69,716	73,992	59,194	74,000	
Lipscomb	55,572	42,519	48,791	39,033	55,000	
Moore	234,688	228,297	209,907	167,926	235,000	215,000
Ochiltree	109,213	98,280	106,278	85,022	115,000	
Sherman	348,012	346,685	361,336	289,069	365,000	400,000

In the same run, new 2070 drawdown targets were set for three counties in High Plains Water District (HPWD), and in Randall County where no district exists. Specifically, Armstrong (14’), Potter (11’), Randall (21’), and Randall-No GCD (21’).

As with the August 31st, 2015 run, Dockum targets were set as a fraction of available drawdown, specifically, NPGCD-west (0.40), Panhandle GCD (PGCD) (0.50), HPWD (0.50), No-GCD (0.50).

In Run 2016.1, the saturated thickness where pumping was curtailed was set to 30 feet.

Run 2016.2: Same as 2016.1, except saturated thickness where pumping was curtailed was set to 10 feet.

Run 2016.3: Same as Run 2016.1, except that some Dockum targets are now based on average drawdown after 50 years (in 2062). Specifically, Panhandle GCD (30'), HPWD (40'), Oldham County-No GCD (30'), Randall County – No GCD (40').

The Ogallala was treated the same as Run 2016.1.

Run 2016.4: Same as 2016.3, except saturated thickness where pumping was curtailed was set to 10 feet.

For all of these runs, pumping in GMA-2 was set to the 2012 estimated rate, multiplied by a factor of 1.5. Limited sensitivity analyses indicated that GMA-1 results were not very sensitive to GMA-2 pumping rates.

2 RESULTS

The results are provided in the form of tables for each of the runs. Tables 1 – 6 for each run are identical in format and content to Tables 1 – 6 provided in the August 31, 2015 memo. Note that tables are prefixed with the run number, e.g. Table 6, Run 4 is titled 2016.4.6. The run results are presented sequentially.

In most cases, targets were met. The fraction remaining goals for the Ogallala Aquifer (Table 1) were within 0.01 for all cases. The fraction remaining goals were also met for the Dockum Aquifer (Table 2) within 0.01 for all cases. The new drawdown goals for portions of counties in HPWD were met within one or two feet (Table 4) except in Potter County. Pumping was set to nearly zero, but drawdown exceeded 11 feet in all cases. The drawdown goals for Dockum were met for the Districts and counties specified.

The effect of decreasing the saturated thickness at which pumping was curtailed was to increase availability slightly in some counties. For example, in Dallam County in 2016 the target pumping was 400,000 acre-feet/year. When the minimum was 30', only 395,000 acre-feet/year was achieved, while a 10' minimum allowed the full 400,000 acre-feet/year to be achieved.

Table 2016.1.1: Groundwater in storage and fraction remaining by zone for the Ogallala Aquifer in GMA-1.

Ogallala Zone	Groundwater In Storage (af)							Fraction Remaining from 2012
